

College Management System

A backend system for managing university academic operations.

This project is being developed as a fun project to explore:

- Database design
- Django architecture
- REST API development
- Authentication and authorization
- Real-world relational modeling

Overview

The system manages core university entities such as:

- Students
- Professors
- Departments
- Courses
- Course Offerings
- Semesters
- Enrollment
- Grades

The main goal is to design a scalable relational database and implement it using Django and Django REST Framework.

User Management

- Custom user authentication
- Student profiles
- Professor profiles

Academic Management

- Department management
- Course management
- Semester management
- Course offerings

Enrollment System

- Student course registration
- Grade management
- Enrollment status tracking

Tech Stack

Technology	Purpose
Python	Backend language
Django	Web framework
Django REST Framework	API development
PostgreSQL	Database
